

## MyEclipse CSS editor

This paper describes the new and improved editors of MyEclipse for CSS files.

### General

**Author:**

Sascha Wolski

<http://www.laliluna.de/tutorials.html> – Tutorials for Struts, EJB, xdoclet and eclipse.

**Date:**

April, 28 2005

**Software:**

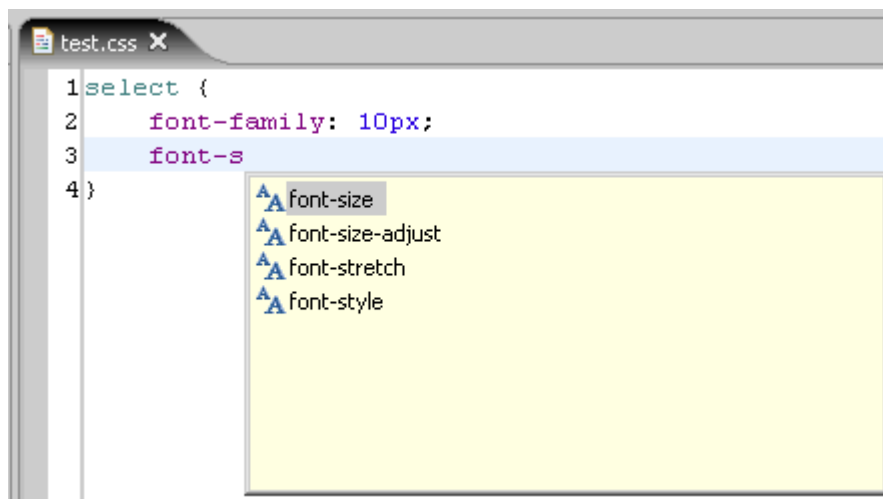

Eclipse 3.x

MyEclipse 3.8.x

### CSS Editor

#### Content Assist

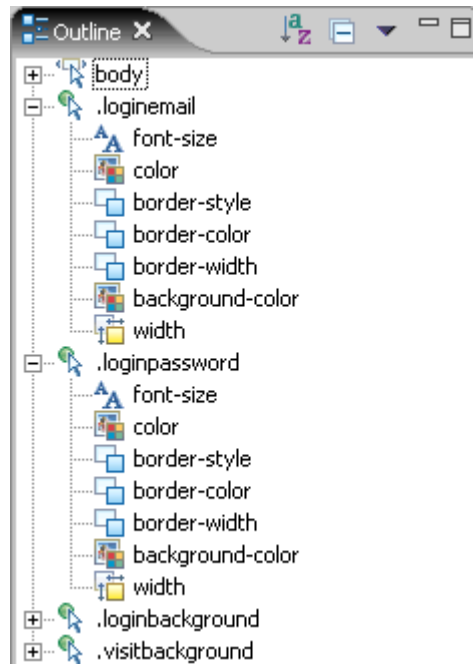

The CSS Editor of MyEclipse supports content assistant, which appears when you press *STRG* + *SPACE*.

#### Outline View

The Outline View can be used for easy navigation through the CSS document. If you select an item of the Outline View the cursor of the editor jumps to the position of the item.

You can open a view in the menu "windows -> show view".

## Properties tab

The Properties tab displays all properties and its values for the current selected style sheet element. You can add, edit or delete values and the property will automatically be added, edited or deleted within the current element.

Property	Value	
+	Aural	
+	Box model	
+	Colors and Backgrounds	
-	Fonts	
	font	
	font-family	
	font-size	9px
	font-size-adjust	
	font-stretch	
	font-style	
	font-variant	
	font-weight	
+	Generated content/List	

## Formatting code

The CSS Editor supports Code formatting like the Java Editor of MyEclipse. You can format the CSS document with the key shortcut **STRG + SHIFT , F** (default).

## CSS options

You can configure the CSS options on the Preferences tab of MyEclipse (Window > Preferences > MyEclipse > Editors > CSS). There are a couple of formatting and style options.
